

2022 Estimated Supply of Child Care and Early Education Programs in Oregon

This document contains tables with information about Oregon’s child care supply as of December 2022. The Estimated Supply dataset is compiled by the Oregon Child Care Research Partnership at Oregon State University using data collected by the Resource & Referral system through a biennial update managed by Central Coordination at Western Oregon University. Results of the Estimating Supply analysis have been used since 1999 to track Oregon's early care and education supply over time.

The following are a collection of tables that include an overview of the number of providers and slots in early care and education, the supply by age group, the percent of child population who have access to a slot, and an overview of publicly funded slots.

Information is provided for the overall supply as well as supply by type of care and the main types of regulatory status: licensed, recorded, and exempt. In addition, information is provided by age group and regulatory type at the county level (available by Early Learning Hub by request). Age groups are divided into 0-2 year olds, 3-5 year olds, and 6-12 year olds.

**Numbers reported here may not represent all child care and early education in Oregon. Not all programs are included in Find Child Care Oregon (FCCO), which is the base dataset for the Estimating Supply analysis. In particular, in 2022, SUN Community Schools (exempt after school programs) in Multnomah County elected to not be included in FCCO. In 2020, this program had 83 locations with over 12,700 slots. With these programs not in FCCO, the reported results show a significant decrease in slots; however, this decrease is due to a change in available data, not necessarily a decrease in available child care in the community.
